

MEMORANDUM

DATE: December 3, 1968
TO: Solid Waste File
SUBJECT: Tybout's Corner, Proposed Landfill.

On December 2, 1968, R. Westerman telephoned Mr. Woodruff (Geological Survey - University of Delaware) concerning geological aspects of the proposed Tybouts Corner Landfill.

Mr. Woodruff stated that the water table indicated by the test borings at the site was probably low due to taking information directly after borings without leaving time for setting. Mr. Woodruff stated further, that the borings at the site, if taken in October 1968, or in the first half of November 1968, would indicate a ground water table 4 or 5 feet lower than the highest expected ground water table. Mr. Woodruff also stated that he was certain that the groundwater from the proposed site flows into (not under) Pidgeon Run.
